

ABSTRACT

A method of delivering an interactive on-line memorial to an Internet user can include the steps of: providing a main website connected to a web server, the main website having one or more memorial sites, the main website and memorial sites being accessible on-line via a workstation; providing a confidential password for editing each of the memorial sites from a central workstation, wherein the confidential password provides editing access to the one or more memorial sites and wherein the central workstation is different from the web server; preparing a first memorial site by accessing the main website and inputting the confidential password to gain editing access to the first memorial site; and inputting a first data set to the first memorial site, the first data set comprising preliminary information, including the name of the deceased.
